

Floral Care Tips

keep your flowers looking great!

1. Hydration

Your flowers are thirsty!
Check the water levels of your vases and vessels regularly.
Refresh with cool, clean water as needed.

2. Temperature

Your flowers need to chill out!
Keep your arrangements and buckets in a cool room
and out of direct sunlight until it's showtime.

3. Tools

Your flowers need careful cuts!
When making your own DIY arrangements, make sure
to use clean sharp snips. Cut your stems at a 45 degree
angle so they can take up water easily.

Do's and Don'ts

Do...

Give yourself plenty of time to make all of your DIY arrangements.

Floral design can take longer than you think, so enlist some friends or family members to give you a hand!

Don't...

Leave your bouquet out of water for too long.

Pop it back in a vase in between events to keep it perky!

Don't...

Leave your flowers in direct baking sun or gusty wind.

This can wilt or damage the flowers.

Do...

Clean all of your vases and vessels with warm soapy water, rinse, and fill with clean cool water before you start arranging.

Clean vases = happy flowers!
